

Command example:

1. create table T1(A Integer Primary Key,
B Integer,
C Integer);
2. insert into T1 values (1,400,500);
3. insert into T1 values(2,350,500)
4. insert into T1 values(3,400,350);
5. insert into T1 values(4,300,360);
6. insert into T1 values(5,400,250);
7. insert into T1 values(6,420,250);
8. create index I1 on T1(A);
9. create index I2 on T1(B);

```
Select A, B, C  
From T1  
Order by 1000*A+B*3 desc  
Limit 3;
```

Score:

```
Record 0: 2200  
Record 1: 3050  
Record 2: 4200  
Record 3: 4900  
Record 4: 6200  
Record 5: 7260
```

So the selection should return the last three records:

```
Record 5: (6,420,250);  
Record 4: (5,400,250);  
Record 3: (4,300,360);
```

10. Drop Index I1;
11. Drop Index I2;
12. Drop Table T1;
