

Sep 10, 2014 / LEMMA 2:  $S$  is a perfect matching.

Obs 0:  $S$  is a matching.

Obs 1: A man  $m$  keeps getting engaged to ~~better~~ more preferred women.

Obs 2: If  $w$  proposes to  $m'$  after  $m$ ;  $m \succ m'$  in  $L_w$

---

Pf of Lemma 2:

LEMMA 4: If a woman  $w$  is free  $\Rightarrow \exists$  ~~is~~ one man  $m$  that she has not proposed to yet.

Pf idea: Proof by contradiction (use Lemma 4 & definition of the GS algo).

---

Pf details: Assume  $S$  is not a perfect matching  
 $\Rightarrow \exists$  a free woman  $w$  (at the end of algo),  
by Algodef'n

$\Rightarrow \exists m$  s.t.  $w$  has not proposed to  $m$  (\*)  
Lemma 4

Since  $S$  is output

$\Rightarrow$  Algo has terminated  $\Rightarrow$  contradicts (\*)  
condition  $\rightarrow$  on the while loop

---

Pf of Lemma 4

Pf. idea: Proof by contradiction.

(Use Obs 1 + pigeonhole principle)

If  $n-1$  pigeons are assigned to  $n$  holes  $\Rightarrow \exists \geq 1$  hole with no pigeons

Pf details. For sake of contradiction, assume  
 $\exists$  a free woman  $w$  who has ~~never~~ proposed to  
all the  $n$  men.

$\Rightarrow$  all men are engaged.

By Obs 1 +  
algo defn  $\Rightarrow$   $n$  engaged men but  $\leq n-1$  engaged  
women.

$\Rightarrow$  contradicts pigeonhole principle (engaged men  $\equiv$  holes  
" women  $\equiv$  pigeons)

---

LEMMA 3:  $S$  has no instability.

Pf idea: Proof by contradiction (case analysis + Obs 2)

---

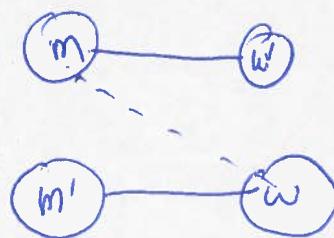

Pf details: For contradiction assume  $\exists (m, w) \notin S$

s.t.

①  $m > m'$  in  $L_w$

**AND**

②  $w > w'$  in  $L_m$

---

Case 1:  $w$  never proposed to  $m$ .

Since  $(m', w)$  are engaged  $\Rightarrow w$  proposed to  $m'$   
(but not  $m$ )

$\Rightarrow m' > m$  in  $L_w \Rightarrow$  contradicts ①!  
Obs 2

---

Case 2:  $w$  proposed to  $m$ .

Case 2.1:  $m$  accepted  $w$ 's proposal  
 $\rightarrow (m, w)$  were engaged.

but later  $(m, w')$  get engaged

$\Rightarrow$  Obs 1  $w' > w$  in  $L_m \Rightarrow$  contradicts ②!

---

Case 2.2:  $m$  rejected  $w$ 's proposal

$\Rightarrow$  by Alg's defn  $(m, w'')$  were engaged at that time  
 $w'' > w$  in  $L_m$

If  $w'' = w' \Rightarrow$  contradicts ②!

If not, by Obs 1  $\Rightarrow w' > w''$  in  $L_m$

$\Rightarrow w' > w$  in  $L_m$   
 $\Rightarrow$  contradicts ②!

---
