

1. Complete the design document as specified in the feedback for Assignment 3. It should be a professional document with no overlapping figures and text, and other formatting errors. It should be technically sound and must be accompanied by an enterprise layer diagram and an architectural model with figure number, caption and a related discussion of the project.
2. Now that you have identified the services that will mash-up in your development, test them individually by developing and deploying a sample client for each of these. Specify the details in a section titled "Implementation Details". Explain the steps in developing this prototype. (For example: A JSP client for each WSDL defined service may be used to test the capabilities and usability of the service.)
3. Provide the detailed plan (stepwise solution) for integration or service-oriented orchestration of the final application. Plan and design before you implement.
4. Decide on a plan for presenting your project on 12/3. Provide details of this plan.
5. Submit the cumulative document in the ublearns digital drop box.
6. Due date: 11/16/2007 (no extension)
