University At Buffalo
COURSE OUTLINE

A. Course Title:  CSE 487/587 Information Structures

B. Curriculum:  Computer Science and Engineering Offering
   Program:  BS, BA, MS and Ph.D

C. Catalog Description:  4 Credits Elective
The objective of the course is to give an overview of the use of information technology in large-scale commercial and scientific systems, with emphasis on the use of state of the art computing in realizing various services and the frameworks supporting these services. Concepts covered include: enterprise modeling, process modeling, process automation and streamlining, workflow management, messaging, persistent message queues, transaction monitoring, document exchange, application servers, service definition (web services, web services definition language: WSDL), connection and resource reservation protocols (TCP, WSRF), integration technologies and architectures (Java 2 Enterprise Edition: J2EE, eXtensible Markup Language: XML, and Globus toolkit).

D. Class Timing and Location:  Tu/Th 8.00-9.20AM, NSC 205

Tools/Languages:  Java SDK1.4, Java 2EE, XML, SOAP, Globus/Grid development environment

F. Instructor Information:  Instructor: B. Ramamurthy (Bina)
   127 Bell Hall
   bina@cse.buffalo.edu
   http://www.cse.buffalo.edu/~bina
   716-645-3180 (108)
   Office Hours: MW: 1-2.20PM

G. Program Competencies:  ACM Curriculum 2001 suggests a model curriculum. Among the topics specified in that curriculum, this course will cover:
   1. NC1: Net-centric Computing: Distributed Systems: Describe emerging technologies in the net-centric computing area and assess their current capabilities, limitations, and near-term potential. (Addressed by objective 1 through 7).
   2. NC5: Building Web Applications: The Role of middleware, enterprise-wide web applications: Implement a distributed system using any two distributed object frameworks and compare them with regard to performance and security issues. (Addressed by objectives 2,3,4 and 6)
   3. SE2: Using APIs: Design, implement, test, and debug programs that use large-scale API packages. (Addressed by objectives 2 and 6)
4. SE3: Software Tool and environments: Programming environments, testing tools, scripting and configuration management tools. (Addressed by objective 4)

5. SE9: Component-based programming: Apply component-oriented approaches to the design of a range of software including those required for concurrency and transactions, reliable communication services, database interaction including services for remote query and database management, secure communication and access. (Addressed by objective 2)

6. SE12: Specialized System Development: Distributed Systems: Grid Systems: Outline the central technical issues associated with the implementation of specialized systems development. (Addressed by course objectives 1 through 4)

7. CN4: High Performance computing: Recognize problem areas where computational modeling enhances current research methods (such as grid computing). (Addressed by course objectives 1, 3 and 5).

H. Course Objectives: At the completion of the course, the student should be able to:

1. Understand the application context of large scale distributed systems. For example: Scientific and industrial applications, from biomedical to astrophysics.
2. Work with the current application models: component-oriented, and grid-oriented.
3. Analyze and design the infrastructure needs of a large scale distributed system. For example: computing elements, configuration, deployment details, peer-to-peer communication.
4. Work with development tools (Ex: Eclipse integrated development environment, Apache Ant, and JUnit).
5. Understand and work with open grid services architecture and infrastructure.
7. Technology Objectives: Students will be able to demonstrate the ability to design, implement, and deploy distributed systems based on Java technology and Grid Technology.

I. Assessment of Student Learning:

1. A mid-semester exam will be given during the semester and a three-hour final exam during the exam week scheduled by the university.
2. We will also use additional methods of evaluation to include: Graded programming assignments/projects, and lab exercises.

J. Learning Resources and other Support: It is required that all students attend the recitation that will be conducted by a Graduate Teaching Assistant (GTA). The instructor for the courses and the GTA will have each 3 hours of open office hours each per week to help with any question related to the course. Students are encouraged to use the open hours of Computer Science Lab at 338 Bell Hall and the Grad lab. Each student will be allocated individual project space to install the appropriate software needed for the labs.
K. Tentative Schedule:

<table>
<thead>
<tr>
<th>Week of</th>
<th>Topics Covered</th>
<th>Reading Material</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/17</td>
<td>First class: 1/18: General Introduction; Course Outline; Client/server systems.</td>
<td>Course outline handout</td>
</tr>
<tr>
<td>1/24</td>
<td>Distributed System using Java RMI. Enterprise Computing: technology landscape.</td>
<td>Class notes: Will be posted</td>
</tr>
<tr>
<td>1/31</td>
<td>Project 1 discussion; Setting enterprise integration design objectives. Recitation: Distributed system using servlets.</td>
<td>java.sun.com/j2ee</td>
</tr>
<tr>
<td>2/7</td>
<td>Designing the enterprise architecture; establishing the enterprise infrastructure; JDBC and using Oracle server</td>
<td>Department web page</td>
</tr>
<tr>
<td>2/14</td>
<td>Java 2 Enterprise Edition (J2EE). Technologies, enterprise application model, design and implementation of a sample application.</td>
<td>java.sun.com/j2ee</td>
</tr>
<tr>
<td>2/21</td>
<td>Grids in context: Fundamental of a grid</td>
<td>Ch. 1</td>
</tr>
<tr>
<td>2/28</td>
<td>The scientific grid and the industrial grid</td>
<td>Ch. 2 and Ch. 3</td>

**Lab (Project) Topics**

Note: Each lab will involve complete installation of all the necessary toolkits, software packages and servers by each student (or group of students) in their workspace. Students will also write a detailed technical report on the project they implement.

Lab 1: Design, implement and deploy a web application with component-oriented middleware  
4 weeks

Lab 2: Design, implement and deploy a basic grid-oriented application.  
4 weeks

Lab 3: Design and implement a sophisticated applications with groups within the class interacting.  
4 weeks

**L. Grading Policy:**

Grades will consist of the following components:

Projects (3 projects) : 50%
Midterm Exam : 20%
Final Exam : 25%
Class Participation : 5%

<table>
<thead>
<tr>
<th>Grade Range</th>
<th>Letter Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>95 - 100</td>
<td>A</td>
</tr>
<tr>
<td>90 - 94.99</td>
<td>A-</td>
</tr>
<tr>
<td>85 - 89.99</td>
<td>B+</td>
</tr>
<tr>
<td>80 - 84.99</td>
<td>B</td>
</tr>
</tbody>
</table>
The *Minimal* point distribution guideline will be as above. We reserve the right to alter component weighting or provide a “curve” on an assignment as warranted. In order to pass this course you must have passing average in the Exam component of the course. All assignments will be graded and returned in a timely manner. When an assignment is returned, you will have a period of one week to contest any portion of the grade. Grading conflicts will be first resolved with the TA who graded your assignment. If the conflict cannot be resolved, the instructor will mediate the dispute. When contesting a grade, you must be able to demonstrate how your particular solution is correct. Also, when contesting a grade, the instructor or TA reserves the right to re-evaluate the entire exam, not just the question in dispute.

**Projects**

Projects constitute a major component of the course. Students will apply the concepts studied during the lecture in three group projects: an introductory project in enterprise systems, and two large projects in grid computing.

You will be given approximately four weeks to complete each project. *Do not be lulled into a safe sense of security thinking you have a lot of time to implement each project!* Much of your project development time will be spent in the design phase of your code. When implementing your solution, you should plan on using an *incremental development* path. You should plan your project in achievable stages such that you can get parts of your solution working a little at a time. This will help maximize partial credit during grading. Late assignments will be penalized at a rate of 25% of the achieved grade for each day overdue. The penalty will be assessed from the due date and time indicated on the assignment.
Exams

There will be a midterm exam that will be administered and graded before the course resign date. Midterm material will cover all lecture and reading assignments before the exam, as well as concepts from homework and lab assignments. The final exam is comprehensive, covering all lecture, lab, and homework areas. Make-up exams are not administered! If you miss the midterm exam or final, you will be assigned a grade of 0 points for that component.

Lecture and Recitation Attendance

Attendance is required for all lectures and assigned recitations. You are responsible for all materials presented in lecture and recitation, as well as handouts and/or other supplemental material. I do not give *incomplete* in the course, unless under the most dire of circumstances. By definition, an incomplete is warranted if the student is capable of completing the course satisfactorily, but some traumatic event has interfered with their capability to finish within the timeframe of the semester.

M. Academic Integrity:

UB’s definition of Academic Dishonesty in part is, “Students are responsible for the honest completion and representation of their work”. You should also read the departmental academic honesty policy located at [http://www.cse.buffalo.edu/academics-academic_integrity.shtml](http://www.cse.buffalo.edu/academics-academic_integrity.shtml).

You must abide by the UB Academic Integrity policy at all times. Remember that items taken from the web are also covered by the academic honesty policy. If you are caught violating the academic integrity policy, you will minimally receive a ZERO in the course. We will also place the incident in your permanent record. If it is your second violation, we will recommend to the Undergraduate/Graduate committee Chair that formal proceedings be filed against you, which would mean either you could be expelled, or your degree progress will be terminated within the Computer Science and Engineering department.

N. Help:

When asking questions, please try and talk with the TA first. He has probably covered the question many times with other students. Take advantage of my office hours and theirs. We have about 6 hours amongst us. Attend the recitations regularly.

If you have special needs due to a disability, and are registered with the Office of Disability Services, we need to know as soon as possible! Do not assume that we have received the
paperwork! (Although it is your responsibility to make sure we receive the paperwork as soon as possible from Disability Services).

O. TOPICS

1. Introduction to enterprise systems 1 week
   1.1 Client server systems
   1.2 Enterprise computing technology landscape
   1.3 Application models
   1.4 Naming Service
   1.5 Location transparency
2. Component programming 2 weeks
   2.1 Enterprise Java bean (EJB)
   2.2 Session bean and entity beans
   2.3 Resources and access methods
3. Introduction Java 2 Enterprise edition 1 week
   3.1 J2EE application model
   3.2 Web tier
   3.3 EJB tier
   3.4 Resources Tier
4. Development environment Macromedia’s JRun4 1 week
   4.1 Application model
   4.2 Environment context
   4.3 Java Naming and Directory Interface (JNDI)
   4.4 Resources (database, message queue)
5. Introduction to Grid Computing 1 week
   5.1 Grid in context
   5.2 Scientific application domain
   5.3 Industrial application domain
6. Grid Architecture (anatomy) and Functions (physiology) 3 weeks
   6.1 Web Services framework
   6.2 Open Grid Services Architecture
   6.3 Open Grid Services Infrastructure
   6.4 Globus toolkit
   6.5 Grid application model
   6.6 Grid Core Tutorial and Globus installation
7. Virtual Organization concept 1 week
   7.1 Virtualization
   7.2 Federation
   7.3 Provisioning
   7.4 Logging
   7.5 Events and Notification
   7.6 Service Data
8. Resource and service management 1 week
8.1 Resource Descriptions
8.2 Resource management framework
8.3 Resource discovery and selection
8.4 Policies and scheduling
8.5 Resource brokers

9. Reliable Grid clients and services 1 week
   9.1 A service-oriented architecture
   9.2 Data-intensive applications
   9.3 Data integration and management services

10. Instrumentation and monitoring 1 week
   10.1 Event monitoring
   10.2 Instruments for monitoring
   10.3 Sensor and sensor management
   10.4 Performance diagnosis
   10.5 Network weather service

11. Security for Virtual organizations 1 week
   11.1 Security requirements
   11.2 Dynamic trust domain
   11.3 Emerging security technologies
   11.4 Certification Authority
   11.5 Webservices security
